TITLE: Letter to the Editor (Pis'mo v redaktsiyu).
Regulation of the Supply of Glass for Technical Purposes
(Uporyadochit' postavki tekhnicheskogo stekla).

PERIODICAL: Steklo i Keramika, 1958, Nr 1, pp. 26-26 (USSR)

ABSTRACT: In recent years the production of glass for technical purposes has increased considerably and also a better assortment is available; it was, however, not possible to satisfy the demands of economy. The demand for triplex- and steel wire curved glass is intended to be produced in 1963 in quantities that are five times as great as in 1957. The automobile factories in the USSR are supplied with curved glass by the Konstantinovsk "Avtosteklo" (Ukraine) which is not rational with respect to transport. The technology of the series production of curved automobile glass is, however, not yet fully developed, which entails much waste and renders production considerably more expensive. This task would have to be solved in cooperation with the Institute for Glass and its construction offices. In connection with the increase of technical culture and the considerable development in the field of building dwelling houses in the

Regulation of the Supply of Glass for Technical Purposes 72-1-8/13

USSR, demand for a number of glass products has increased considerably and can, for the time being, not be satisfied because production does not yet function satisfactorily, as is the case, e.g. with signal glass for the railroads, which is manufactured by the works at Chernyatinsk. From 1958 onwards, signal glass is to be produced in accordance with the new regulations GOST (Nr 8547-57), and therefore the technology of production, particularly of red glass must be radically improved. The production of multi-colored light filters is carried out by hand in the Chernyatinsk works, whereas in the German Democratic Republic and in Czechoslovakia this kind of production is mechanized. The glass works "Velikiy Oktyabr'" have difficulties with the production of special glass, and the works "Yarvakandi" and Misheronk have difficulties with the production of glass tubes of ϕ 2" and larger. This task ought to be solved by the Gomel'glass works (Belorussian SSR) with the help of the Institute for Glass. Instead of the many existing technical conditions a uniform standard ought to be introduced by the State. For the purpose of a general settlement it would be necessary that decisions be taken by the State

TOPIC TAGS: antibody, animal disease, man, disease incidence

ABSTRACT: In a test of 468 persons aged 20 to 22, 18.5 percent showed anti-ornithosis antibodies (determined by complement fixation). The positive percentage varied according to the origin of the subjects, but no difference was found between rural and urban areas. In closed communities the index of positive reactions increased in the course of 3 months from 6.2 and 7.3 percent to 25.6 and 19.1 percent, respectively; of the 40 persons kept under constant observations, 7 showed an increase in antibody titer. "Study of Incidence of Ornithosis Antibodies in Horses and Men."

Bucharest, Studii si Cercetari de Inframicrobiologie, Vol 14, No 2,
1963; pp 131-135.

Abstract [English summary modified]: Complement fixation studies of
166 equine and 16 human sera of the horse grooms revealed that 97 of
former and 13 of latter were positive, suggesting horses may be a
natural reservoir of the ornithosis virus. Two tables; 7 Rumanian,
1 Soviet, 1 Japanese and 4 Western references.

Bucharest, Studii si Cercetari de Inframicrobiologie, Vol 14, No 2, 1963; 161-170.

Abstract [English summary modified]: Positive or doubtful rickettsial microagglutination tests were found in 28 out of 39 patients with thrombophlebitis obliterans, 3 of 4 erythema nodosum, all 5 with thromboangiitis obliterans; but only 5 of 11 with other diseases. Of the 26 serologically positive, 24 reacted with *Rickettsia burneti*; from the venous blood of 3 patients *Rickettsia* strains were isolated, including *R. burneti* in 2 instances. Tetracyclines were found effective therapy in thrombophlebitic affections. Much reference to Giroud's data from French Morocco. Four tables; 5 French and 11 Rumanian references.

in Various Epizootic Conditions."

Bucharest, Studii si cercetari de inframicrobiologie, Vol 14, No 3,
1963; pp 283-294.

Abstract [English summary modified]: Experiments with vaccines during
epizootics of ovine abortion, using virus from fetal membranes of
affected lambs or an apparently closely related calf bronchopneumonia
pararickettsia, inactivated either by Ag ion treatment or formalin
after $Al(OH)_3$ adsorption: rate of abortion, lamb mortality and ewe
sterility were consistently more favorable in vaccinated than control
groups; Ag was better than formalin inactivation, homologous virus
superior to the bovine pararickettsial strain. Serologic tests agreed
with clinical results. Seven tables; 9 Western and 13 Rumanian ref's.

"The Incidence of Pararickettsial Infection in Bucharest Regiune."

Bucharest, Studii si Cercetari de Inframicrobiologie, Vol 17, No 2, 66, pp 125-128.

Abstract: In a study of serum samples from 907 persons working in the zootechnical sector, the authors found antipararickettsial antibodies in 43.3 percent. The incidence in doctors and veterinary technicians was 69 percent, in cattle handlers 42.1 percent, in pig handlers 31.2 percent, in poultry handlers 27.4 percent and in sheep handlers 25 percent. A direct correlation was found to exist between the degree of infection of the animals and the incidence and titer of antibodies in their handlers.

"Morphopathologic Alterations Produced by Measles Virus (Edmonton Strain) in F. L. Amniotic Cells."

Bucharest, Studii si Cercetari de Inframicrobiologie, Vol 14,
No 4, 1963, pp 427-434.

Abstract [Authors' English summary modified]: Morpho-pathological changes produced by measles virus (Edmonton strain) in line F.L. amniotic cells were demonstrated by hematoxylin-eosine stained collodium film preparations. The cytopathic effect was characteristic within 48 hours, consisting at first in abnormal division of the amniotic cells and, after 72 hours, in the formation of huge polynucleated "pseudosyncythia". Cultivation of amniotic F.L. cells, which show an early and characteristic cytopathic effect, is recommended as a method for the identification of measles virus.

Includes 12 figures and 18 references, of which 8 English-language, 1 Russian, 1 Italian and 8 Rumanian.
